

WHAT EVERYONE NEEDS
IS A
FOUNDATION™
TO BUILD THEIR
BUSINESS ON!

Yes, Pyramid has released **FOUNDATION**. In one system, you have complete Customer Management, Letter Writing, and Mail Merge, which puts you in total control of your business.

Pyramid designed **FOUNDATION** with you in mind. You need a system that works for you . . . not against you. You need a system that is easy to learn and operate. It is on these principles that **FOUNDATION** was built.

FOUNDATION stores all of your customer's files on the system. On a single screen, **FOUNDATION** displays your customer's name, address, as well as two phone numbers. Additionally, it stores up to 30 codes which you assign, up to 6 date fields, and 6 numeric fields per customer. Finally, on one screen, you can see all of the information pertaining to each customer. Included might be his last purchase date, product purchased and purchase amount. What the system stores is up to you. No longer do you need to maintain cumbersome filing systems . . . **FOUNDATION** will do it for you!

With **FOUNDATION's** Letter Writing function you can create letters . . . virtually automatically. Even a Word Processing System cannot offer what **FOUNDATION** offers. Your headings, salutation, and date are automatically positioned, and typed on the first page of your letter. When your letter goes to two or more pages, **FOUNDATION** automatically inserts your heading on those pages. No need to retype the company's name or a page number. **FOUNDATION** even tells you what line of the letter you are

on . . . and, it remembers how many lines of text you should have per page. Totally automatic letter writing is now at your fingertips . . . as long as your fingertips are on **FOUNDATION**.

Once your customers are on file and you've written a letter, **FOUNDATION** really shows its power. You can ask the system to give you the customers who are manufacturers, and who purchased something from you in the last year . . . and it will tell you. It will tell you which of your customers fit any criteria you give it. It will sort on a virtually unlimited number of keys or codes. Once the system has determined which customers fit your criteria, it can print a list for you, it can print labels for you . . . in any order (Zip Code, Alphabetical, Phone Number, Customer Name) that you require. Or, the system will insert each of their names into individual letters . . . and print them all for you automatically, while you attend to more important matters. **FOUNDATION** can fulfill all of your daily requirements . . . in one, easy to learn system.
